8	Exercises	7

*Abstract*—This manual provides a simple introduction to digital signal processing.

## 1 SOFTWARE INSTALLATION

Run the following commands

```
sudo apt-get update
sudo apt-get install libffi-dev libsndfile1 python3
    -scipy python3-numpy python3-matplotlib
sudo pip install cffi pysoundfile
```

## 2 DIGITAL FILTER

2.1 Download the sound file from

```
wget https://raw.githubusercontent.com/
gadepall/
EE1310/master/filter/codes/Sound_Noise.wav
```

2.2 You will find a spectrogram at <https://academo.org/demos/spectrum-analyzer>. Upload the sound file that you downloaded in

Problem 2.1 in the spectrogram and play. Observe the spectrogram. What do you find?

**Solution:** There are a lot of yellow lines between 440 Hz to 5.1 KHz. These represent the synthesizer key tones. Also, the key strokes are audible along with background noise.

2.3 Write the python code for removal of out of band noise and execute the code.

**Solution:**

```
wget https://github.com/Bhanu-das/EE3900
-2022/blob/main/filter/codes/
Cancel_noise.py
```

2.4 The output of the python script in Problem 2.3 is the audio file Sound\_With\_ReducedNoise.wav. Play the file in the spectrogram in Problem 2.2. What do you observe?

**Solution:** The key strokes as well as background noise is subdued in the audio. Also, the signal is blank for frequencies above 5.1 kHz.

## 3 DIFFERENCE EQUATION

3.1 Let

$$x(n) = \left\{ \underset{\uparrow}{1}, 2, 3, 4, 2, 1 \right\} \quad (3.1)$$

Sketch  $x(n)$ .

**Solution:** python code

```
wget https://github.com/Bhanu-das/EE3900/
blob/main/Assign1/codes/Q3/X_Y.py
```

sketch

```
wget https://github.com/Bhanu-das/EE3900/
blob/main/Assign1/fig/Q3.png
```

3.2 Let

$$y(n) + \frac{1}{2}y(n-1) = x(n) + x(n-2),$$

$$y(n) = 0, n < 0 \quad (3.2)$$

\*The author is with the Department of Electrical Engineering, Indian Institute of Technology, Hyderabad 502285 India e-mail: gadepall@iith.ac.in. All content in the manuscript is released under GNU GPL. Free to use for anything.

Sketch  $y(n)$ .

**Solution:** The following code yields Fig. fig:xnyn.

```
wget https://github.com/gadepall/EE1310/raw/master/filter/codes/xnyn.py
```

```
wget https://github.com/Bhanu-das/EE3900-2022/blob/main/filter/figs/xnyn.pdf
```

3.3 Repeat the above exercise using a C code.

**Solution:** c code

```
wget https://github.com/Bhanu-das/EE3900/blob/main/Assign1/codes/Q3/x_y.c
```

#### 4 Z-TRANSFORM

4.1 The Z-transform of  $x(n)$  is defined as

$$X(z) = \mathcal{Z}\{x(n)\} = \sum_{n=-\infty}^{\infty} x(n)z^{-n} \quad (4.1)$$

Show that

$$\mathcal{Z}\{x(n-1)\} = z^{-1}X(z) \quad (4.2)$$

and find

$$\mathcal{Z}\{x(n-k)\} \quad (4.3)$$

**Solution:** From (4.1),

$$\begin{aligned} \mathcal{Z}\{x(n-k)\} &= \sum_{n=-\infty}^{\infty} x(n-k)z^{-n} \quad (4.4) \\ &= \sum_{n=-\infty}^{\infty} x(n)z^{-n-1} = z^{-1} \sum_{n=-\infty}^{\infty} x(n)z^{-n} \quad (4.5) \end{aligned}$$

resulting in (4.2). Similarly, it can be shown that

$$\mathcal{Z}\{x(n-k)\} = z^{-k}X(z) \quad (4.6)$$

4.2 Obtain  $X(z)$  for  $x(n)$  defined in problem 3.1.

**Solution:**

$$X(z) = \sum_{n=-\infty}^{\infty} x(n)z^{-n} \quad (4.7)$$

But

$$x(n) = \{1, 2, 3, 4, 2, 1\} \quad (4.8)$$

so,

$$X(z) = 1 + 2z^{-1} + 3z^{-2} + 4z^{-3} + 2z^{-4} + z^{-5} \quad (4.9)$$

4.3 Find

$$H(z) = \frac{Y(z)}{X(z)} \quad (4.10)$$

from (3.2) assuming that the Z-transform is a linear operation.

**Solution:** Applying (4.6) in (3.2),

$$Y(z) + \frac{1}{2}z^{-1}Y(z) = X(z) + z^{-2}X(z) \quad (4.11)$$

$$\Rightarrow \frac{Y(z)}{X(z)} = \frac{1 + z^{-2}}{1 + \frac{1}{2}z^{-1}} \quad (4.12)$$

4.4 Find the Z transform of

$$\delta(n) = \begin{cases} 1 & n = 0 \\ 0 & \text{otherwise} \end{cases} \quad (4.13)$$

and show that the Z-transform of

$$u(n) = \begin{cases} 1 & n \geq 0 \\ 0 & \text{otherwise} \end{cases} \quad (4.14)$$

is

$$U(z) = \frac{1}{1 - z^{-1}}, \quad |z| > 1 \quad (4.15)$$

**Solution:** It is easy to show that

$$\delta(n) \stackrel{Z}{\rightleftharpoons} 1 \quad (4.16)$$

and from (4.14),

$$U(z) = \sum_{n=0}^{\infty} z^{-n} \quad (4.17)$$

$$= \frac{1}{1 - z^{-1}}, \quad |z| > 1 \quad (4.18)$$

using the formula for the sum of an infinite geometric progression.

4.5 Show that

$$a^n u(n) \stackrel{Z}{\rightleftharpoons} \frac{1}{1 - az^{-1}} \quad |z| > |a| \quad (4.19)$$

**Solution:** let

$$f(n) = a^n u(n) \quad (4.20)$$

$$f(n) = \begin{cases} a^n, & \text{if } n > 0 \\ 0, & \text{otherwise} \end{cases} \quad (4.21)$$

Now the Z- Transform of  $f(n)$  is

$$F(z) = \mathcal{Z}\{f(n)\} = \sum_{n=-\infty}^{\infty} f(n)z^{-n} \quad (4.22)$$

$$F(z) = \sum_{n=0}^{\infty} a^n z^{-n} \quad (4.23)$$

This forms an infinite Geometric Progression.

$$F(z) = \frac{1}{1 - az^{-1}} \text{ for } z < a. \quad (4.24)$$

4.6 Let

$$H(e^{j\omega}) = H(z = e^{j\omega}). \quad (4.25)$$

Plot  $|H(e^{j\omega})|$ . Is it periodic? If so, find the period.  $H(e^{j\omega})$  is known as the *Discrete Time Fourier Transform* (DTFT) of  $h(n)$ .

**Solution:** The following code plots

```
wget https://raw.githubusercontent.com/
gadepall/EE1310/master/filter/codes/dtft.
py
```

```
wget https://github.com/Bhanu-das/EE3900
-2022/blob/main/filter/figs/dtft.pdf
```

4.7 Express  $h(n)$  in terms of  $H(e^{j\omega})$ . **Solution:** We have,

$$H(e^{j\omega}) = \sum_{k=-\infty}^{\infty} h(k) e^{-j\omega k} \quad (4.26)$$

However,

$$\int_{-\pi}^{\pi} e^{j\omega(n-k)} d\omega = \begin{cases} 2\pi & n = k \\ 0 & \text{otherwise} \end{cases} \quad (4.27)$$

and so,

$$\frac{1}{2\pi} \int_{-\pi}^{\pi} H(e^{j\omega}) e^{j\omega n} d\omega \quad (4.28)$$

$$= \frac{1}{2\pi} \sum_{k=-\infty}^{\infty} \int_{-\pi}^{\pi} h(k) e^{j\omega(n-k)} d\omega \quad (4.29)$$

$$= \frac{1}{2\pi} 2\pi h(n) = h(n) \quad (4.30)$$

which is known as the Inverse Discrete Fourier Transform. Thus,

$$h(n) = \frac{1}{2\pi} \int_{-\pi}^{\pi} H(e^{j\omega}) e^{j\omega n} d\omega \quad (4.31)$$

$$= \frac{1}{2\pi} \int_{-\pi}^{\pi} \frac{1 + e^{-2j\omega}}{1 + \frac{1}{2}e^{-j\omega}} e^{j\omega n} d\omega \quad (4.32)$$

## 5 IMPULSE RESPONSE

5.1 Using long division, find

$$h(n), \quad n < 5 \quad (5.1)$$

for  $H(z)$  in (4.12). **Solution:** from (4.12)

$$H(z) = \frac{1 + z^{-2}}{1 + \frac{1}{2}z^{-1}} \quad (5.2)$$

$$\frac{1 + \frac{1}{2}z^{-1} \overline{1 + z^{-2}} (2z^{-1})}{2z^{-1} + z^{-2}} \\ \frac{1 + \frac{1}{2}z^{-1} \overline{1 - 2z^{-1}} (-4)}{-4 - 2z^{-1}} \\ \frac{5 + 0z^{-1}}{5 + 0z^{-1}}$$

Hence by long division will be

$$H(z) = 2z^{-1} - 4 + \frac{5}{1 + \frac{1}{2}z^{-1}} \quad (5.3)$$

5.2 Find an expression for  $h(n)$  using  $H(z)$ , given that

$$h(n) \stackrel{Z}{\Leftrightarrow} H(z) \quad (5.4)$$

and there is a one to one relationship between  $h(n)$  and  $H(z)$ .  $h(n)$  is known as the *impulse response* of the system defined by (3.2).

**Solution:** From (4.12),

$$H(z) = \frac{1}{1 + \frac{1}{2}z^{-1}} + \frac{z^{-2}}{1 + \frac{1}{2}z^{-1}} \quad (5.5)$$

$$\Rightarrow h(n) = \left(-\frac{1}{2}\right)^n u(n) + \left(-\frac{1}{2}\right)^{n-2} u(n-2) \quad (5.6)$$

using (4.19) and (4.6).

5.3 Sketch  $h(n)$ . Is it bounded? Justify theoretically.

**Solution:** The following code plots.

```
wget https://raw.githubusercontent.com/
gadepall/EE1310/master/filter/codes/hn.py
```

```
wget https://github.com/Bhanu-das/EE3900
-2022/blob/main/filter/figs/dtft.pdf
```

From the graph we can say that maximum value of  $h(n)$  is 1.25. The minimum value of graph is around -0.6.

$$-0.6 > h(n) \geq .25$$

The function is bounded between 1.25 and -0.6.

5.4 Convergent? Justify using the ratio test.

**Solution:**

$$h(n) = \left(-\frac{1}{2}\right)^n u(n) + \left(-\frac{1}{2}\right)^{n-2} u(n-2) \quad (5.7)$$

Ratio test

$$L = \lim_{n \rightarrow \infty} \left| \frac{h(n+1)}{h(n)} \right| \quad (5.8)$$

$$h(n+1) = \left(-\frac{1}{2}\right)^{n+1} u(n+1) + \left(-\frac{1}{2}\right)^{n-1} u(n-1) \quad (5.9)$$

$$h(n) = \left(-\frac{1}{2}\right)^n u(n) + \left(-\frac{1}{2}\right)^{n-2} u(n-2) \quad (5.10)$$

$$\text{as } n \rightarrow \infty \quad u(n) = u(n-1) = u(n+1) = u(n-2) \quad (5.11)$$

$$h(n+1) = \left\{-\frac{1}{2}\right\} h(n) \quad (5.12)$$

$$\left| \frac{h(n+1)}{h(n)} \right| = \left| -\frac{1}{2} \right| = \frac{1}{2} \quad (5.13)$$

$$L = \lim_{n \rightarrow \infty} \left| \frac{h(n+1)}{h(n)} \right| = \frac{1}{2} \quad (5.14)$$

L is less than 1  $h(n)$  is convergent

5.5 The system with  $h(n)$  is defined to be stable if

$$\sum_{n=-\infty}^{\infty} h(n) < \infty \quad (5.15)$$

Is the system defined by (3.2) stable for the impulse response in (5.4)? **Solution:** from ??

$$h(n) = \left(-\frac{1}{2}\right)^n u(n) + \left(-\frac{1}{2}\right)^{n-2} u(n-2) \quad (5.16)$$

then

$$\sum_{n=-\infty}^{\infty} h(n) = \sum_{n=0}^{\infty} \left(-\frac{1}{2}\right)^n + \sum_{n=2}^{\infty} \left(-\frac{1}{2}\right)^{n-2} \quad (5.17)$$

$$\sum_{n=-\infty}^{\infty} h(n) = \frac{4}{3} \quad (5.18)$$

since

$$\sum_{n=-\infty}^{\infty} h(n) < \infty \quad (5.19)$$

$h(n)$  is stable.

5.6 Verify the above result using a python code.

**Solution:** the following code plotes

weget [https://github.com/Bhanu-das/EE3900/blob/main/Assign1/codes/Q5/h\\_nstable](https://github.com/Bhanu-das/EE3900/blob/main/Assign1/codes/Q5/h_nstable)

weget <https://github.com/Bhanu-das/EE3900/blob/main/Assign1/fig/output.png>

Fig. 5.6

5.7 Compute and sketch  $h(n)$  using

$$h(n) + \frac{1}{2}h(n-1) = \delta(n) + \delta(n-2), \quad (5.20)$$

This is the definition of  $h(n)$ .

**Solution:** The following code plots .

weget <https://raw.githubusercontent.com/gadepall/EE1310/master/filter/codes/hndef.py>

weget <https://github.com/Bhanu-das/EE3900-2022/blob/main/filter/figs/hndef.pdf>

5.8 Compute

$$y(n) = x(n) * h(n) = \sum_{k=-\infty}^{\infty} x(k)h(n-k) \quad (5.21)$$

Comment. The operation in (5.21) is known as *convolution*.

**Solution:** The following code plots Note that this is the same as  $y(n)$  in Fig.

weget <https://raw.githubusercontent.com/gadepall/EE1310/master/filter/codes/ynconv.py>

5.9 Express the above convolution using a Teoplitz matrix.

**Solution:** The following code does convolution

weget <https://github.com/Bhanu-das/EE3900/blob/main/Assign1/codes/Q5/teoplitz.py>

Fig. 5.8

Fig. 6.1

5.10 Show that

$$y(n) = \sum_{k=-\infty}^{\infty} x(n-k)h(k) \quad (5.22)$$

**Solution:** from 5.21 we know that

$$y(n) = \sum_{k=-\infty}^{\infty} x(k)h(n-k) \quad (5.23)$$

now consider

$$t = n - k \quad (5.24)$$

will transform into

$$y(n) = \sum_{n-t=-\infty}^{\infty} x(n-t)h(t) \quad (5.25)$$

since  $n$  is finite and  $-\infty < \infty$ , 5.25 is equivalent to

$$y(n) = \sum_{t=-\infty}^{\infty} x(n-t)h(t) \quad (5.26)$$

hence proved.

## 6 DFT AND FFT

6.1 Compute

$$X(k) \triangleq \sum_{n=0}^{N-1} x(n)e^{-j2\pi kn/N}, \quad k = 0, 1, \dots, N-1 \quad (6.1)$$

and  $H(k)$  using  $h(n)$ .

**Solution:** The following code plots

weget [https://github.com/Bhanu-das/EE3900/blob/main/Assign1/codes/XkHk\\_dft.py](https://github.com/Bhanu-das/EE3900/blob/main/Assign1/codes/XkHk_dft.py)

6.2 Compute

$$Y(k) = X(k)H(k) \quad (6.2)$$

**Solution:** The following code plots

weget <https://github.com/Bhanu-das/EE3900/blob/main/Assign1/codes/yk.py>

Fig. 6.2

6.3 Compute

$$y(n) = \frac{1}{N} \sum_{k=0}^{N-1} Y(k) \cdot e^{j2\pi kn/N}, \quad n = 0, 1, \dots, N-1 \quad (6.3)$$

**Solution:** The following code plot. Note that this is the same as  $y(n)$  in Fig.

weget <https://raw.githubusercontent.com/gadepall/EE1310/master/filter/codes/yndft.py>

weget <https://github.com/Bhanu-das/EE3900-2022/blob/main/filter/figs/yndft.pdf>

6.4 Repeat the previous exercise by computing  $X(k)$ ,  $H(k)$  and  $y(n)$  through FFT and IFFT.

**Solution:** The following code plots  $X(n)$ ,  $H(n)$  and  $y(n)$  by fft.

weget <https://github.com/Bhanu-das/EE3900/blob/main/Assign1/codes/fft.py>

Fig. 6.4

6.5 Wherever possible, express all the above equations as matrix equations.

**Solution:**

$$x = \begin{pmatrix} 1 \\ 2 \\ 3 \\ 4 \\ 2 \\ 1 \\ 0 \\ \vdots \\ \vdots \\ \vdots \\ 0 \end{pmatrix}$$

$$J = \begin{pmatrix} 0 \\ e^{-\frac{2\pi j(1)k}{N}} \\ e^{-\frac{2\pi j(2)k}{N}} \\ \vdots \\ \vdots \\ e^{-\frac{2\pi j(N-1)k}{N}} \end{pmatrix}$$

$$X(k) = x^T J \quad (6.4)$$

$$h = \begin{pmatrix} h[0] \\ h[1] \\ \vdots \\ \vdots \\ h[N-1] \end{pmatrix}$$

$$H(k) = h^T J \quad (6.5)$$

$$y = \begin{pmatrix} h[0]x[0] \\ h[1]x[1] \\ \vdots \\ \vdots \\ h[N-1]x[N-1] \end{pmatrix}$$

$$Y(k) = y^T J \quad (6.6)$$

6.6 Verify the above equations by generating the DFT matrix in python.

7 FFT

1. The DFT of  $x(n)$  is given by

$$X(k) \triangleq \sum_{n=0}^{N-1} x(n)e^{-j2\pi kn/N}, \quad k = 0, 1, \dots, N-1 \quad (7.1)$$

2. Let

$$W_N = e^{-j2\pi/N} \quad (7.2)$$

Then the  $N$ -point DFT matrix is defined as

$$\vec{F}_N = [W_N^{mn}], \quad 0 \leq m, n \leq N-1 \quad (7.3)$$

where  $W_N^{mn}$  are the elements of  $\vec{F}_N$ .

3. Let

$$\vec{I}_4 = \vec{e}_4^1 \vec{e}_4^2 \quad \vec{e}_4^3 \vec{e}_4^4 \quad (7.4)$$

be the  $4 \times 4$  identity matrix. Then the 4 point DFT permutation matrix is defined as

$$\vec{P}_4 = \vec{e}_4^1 \vec{e}_4^3 \quad \vec{e}_4^2 \vec{e}_4^4 \quad (7.5)$$

4. The 4 point *DFT diagonal matrix* is defined as

$$\vec{D}_4 = \text{diag} W_8^0 W_8^1 \quad W_8^2 W_8^3 \quad \text{ref(7.6)}$$

5. Show that

$$W_N^2 = W_{N/2} \quad (7.7)$$

6. Show that

$$\vec{F}_4 = \begin{bmatrix} \vec{I}_2 & \vec{D}_2 \\ \vec{I}_2 & -\vec{D}_2 \end{bmatrix} \begin{bmatrix} \vec{F}_2 & 0 \\ 0 & \vec{F}_2 \end{bmatrix} \vec{P}_4 \quad (7.8)$$

7. Show that

$$\vec{F}_N = \begin{bmatrix} \vec{I}_{N/2} & \vec{D}_{N/2} \\ \vec{I}_{N/2} & -\vec{D}_{N/2} \end{bmatrix} \begin{bmatrix} \vec{F}_{N/2} & 0 \\ 0 & \vec{F}_{N/2} \end{bmatrix} \vec{P}_N \quad (7.9)$$

8. Find

$$\vec{P}_4 \vec{x} \quad (7.10)$$

9. Show that

$$\vec{X} = \vec{F}_N \vec{x} \quad (7.11)$$

where  $\vec{x}, \vec{X}$  are the vector representations of  $x(n), X(k)$  respectively.

10. Derive the following Step-by-step visualisation of 8-point FFTs into 4-point FFTs and so on

$$\begin{bmatrix} X(0) \\ X(1) \\ X(2) \\ X(3) \end{bmatrix} = \begin{bmatrix} X_1(0) \\ X_1(1) \\ X_1(2) \\ X_1(3) \end{bmatrix} + \begin{bmatrix} W_8^0 & 0 & 0 & 0 \\ 0 & W_8^1 & 0 & 0 \\ 0 & 0 & W_8^2 & 0 \\ 0 & 0 & 0 & W_8^3 \end{bmatrix} \begin{bmatrix} X_2(0) \\ X_2(1) \\ X_2(2) \\ X_2(3) \end{bmatrix} \quad (7.12)$$

$$\begin{bmatrix} X(4) \\ X(5) \\ X(6) \\ X(7) \end{bmatrix} = \begin{bmatrix} X_1(0) \\ X_1(1) \\ X_1(2) \\ X_1(3) \end{bmatrix} - \begin{bmatrix} W_8^0 & 0 & 0 & 0 \\ 0 & W_8^1 & 0 & 0 \\ 0 & 0 & W_8^2 & 0 \\ 0 & 0 & 0 & W_8^3 \end{bmatrix} \begin{bmatrix} X_2(0) \\ X_2(1) \\ X_2(2) \\ X_2(3) \end{bmatrix} \quad (7.13)$$

4-point FFTs into 2-point FFTs

$$\begin{bmatrix} X_1(0) \\ X_1(1) \end{bmatrix} = \begin{bmatrix} X_3(0) \\ X_3(1) \end{bmatrix} + \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_4(0) \\ X_4(1) \end{bmatrix} \quad (7.14)$$

$$\begin{bmatrix} X_1(2) \\ X_1(3) \end{bmatrix} = \begin{bmatrix} X_3(0) \\ X_3(1) \end{bmatrix} - \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_4(0) \\ X_4(1) \end{bmatrix} \quad (7.15)$$

$$\begin{bmatrix} X_2(0) \\ X_2(1) \end{bmatrix} = \begin{bmatrix} X_5(0) \\ X_5(1) \end{bmatrix} + \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_6(0) \\ X_6(1) \end{bmatrix} \quad (7.16)$$

$$\begin{bmatrix} X_2(2) \\ X_2(3) \end{bmatrix} = \begin{bmatrix} X_5(0) \\ X_5(1) \end{bmatrix} - \begin{bmatrix} W_4^0 & 0 \\ 0 & W_4^1 \end{bmatrix} \begin{bmatrix} X_6(0) \\ X_6(1) \end{bmatrix} \quad (7.17)$$

$$P_8 \begin{bmatrix} x(0) \\ x(1) \\ x(2) \\ x(3) \\ x(4) \\ x(5) \\ x(6) \\ x(7) \end{bmatrix} = \begin{bmatrix} x(0) \\ x(2) \\ x(4) \\ x(6) \\ x(1) \\ x(3) \\ x(5) \\ x(7) \end{bmatrix} \quad (7.18)$$

$$P_4 \begin{bmatrix} x(0) \\ x(2) \\ x(4) \\ x(6) \end{bmatrix} = \begin{bmatrix} x(0) \\ x(4) \\ x(2) \\ x(6) \end{bmatrix} \quad (7.19)$$

$$P_4 \begin{bmatrix} x(1) \\ x(3) \\ x(5) \\ x(7) \end{bmatrix} = \begin{bmatrix} x(1) \\ x(5) \\ x(3) \\ x(7) \end{bmatrix} \quad (7.20)$$

Therefore,

$$\begin{bmatrix} X_3(0) \\ X_3(1) \end{bmatrix} = F_2 \begin{bmatrix} x(0) \\ x(4) \end{bmatrix} \quad (7.21)$$

$$\begin{bmatrix} X_4(0) \\ X_4(1) \end{bmatrix} = F_2 \begin{bmatrix} x(2) \\ x(6) \end{bmatrix} \quad (7.22)$$

$$\begin{bmatrix} X_5(0) \\ X_5(1) \end{bmatrix} = F_2 \begin{bmatrix} x(1) \\ x(5) \end{bmatrix} \quad (7.23)$$

$$\begin{bmatrix} X_6(0) \\ X_6(1) \end{bmatrix} = F_2 \begin{bmatrix} x(3) \\ x(7) \end{bmatrix} \quad (7.24)$$

11. For

$$\vec{x} = 1 \quad (7.25)$$

$$2 \quad (7.26)$$

$$3 \quad (7.27)$$

$$4 \quad (7.28)$$

$$2 \quad (7.29)$$

$$1 \quad (7.30)$$

compute the DFT using (7.11)

12. Repeat the above exercise using the FFT after zero padding  $\vec{x}$ .

13. Write a C program to compute the 8-point FFT.

## 8 EXERCISES

Answer the following questions by looking at the python code in Problem 2.3.

8.1 The command

```
output_signal = signal.lfilter(b, a,
                                input_signal)
```

---

in Problem 2.3 is executed through the following difference equation

$$\sum_{m=0}^M a(m) y(n-m) = \sum_{k=0}^N b(k) x(n-k) \quad (8.1)$$

where the input signal is  $x(n)$  and the output signal is  $y(n)$  with initial values all 0. Replace **signal.filtfilt** with your own routine and verify.

**Solution:**

8.2 Repeat all the exercises in the previous sections for the above  $a$  and  $b$ .

8.3 What is the sampling frequency of the input signal?

**Solution:** Sampling frequency(fs)=44.1kHz.

8.4 What is type, order and cutoff-frequency of the above butterworth filter

**Solution:** The given butterworth filter is low pass with order=2 and cutoff-frequency=4kHz.

8.5 Modifying the code with different input parameters and to get the best possible output.

**Solution:** a better filtering was found on changing the order of filter to 7.
